You may feel you have found your career path early on, but those feelings may fade as you travel the road, making changes in direction or further following your own path. If you are constantly feeling overwhelmed by choice, you may want to consider how to chart your course. Getting Started First things first. Start by taking stock of where you are. You may want to list your goals, dreams, and career aspirations. What direction in your job search are you currently heading? If you know, why? In your history, do you have any experiences that have taken you a certain way? You may have experienced rapid change in your career or have had a change of heart and passion for your career. List any experiences that you may have had along the way. This list will give you a great starting point for further reflection. Steps For Charting Your Course. Step 1: Keep an Open Mind I want to start by mentioning that with any aspect of your life, you will need to keep an open mind. Even a small change in your career can have an effect on your life. If your work situation has been frustrating, you may decide to make a different choice, even if this path is similar to the one you are on. You may also feel conflicted about your decision, because you still have that inner compass telling you something else. If you want to stay in your current situation, recognize this and also keep an open mind to the possibility of making a change. Step 2: Get Moving Going back to the first list you created, you may notice that your values resonate with your career goals. The essence of this may be that you feel that you are moving in the right direction. If you have changed jobs or industries, it may take a while to find the right job. Getting

Is there a way to use something like this? SELECT * FROM users WHERE date_sub(current_time, 7)!= user_lastlogin or user_lastlogin!= 0 I've used user_lastlogin!= 0 to check for user logged in, but I also want to exclude users that haven't done anything in the last seven days. EDIT The user_login field is the one I'm looking at A: Using user_login IS NULL SELECT user_login FROM users WHERE user_login IS NULL OR user_login 0 OR (date_sub(now(), INTERVAL f678ea9f9e
